

## RB-614C

### Remote Control Box

RB-614C is remote control box for VG. RB-614C allows to directly address a program number, enabling pattern switching and RGB ON/OFF operation for characters, dots, crosshatch, etc.

Convenient for remote controlling VG in production lines.

## RB-1848

### Remote Control Box

This is remote control box for VG-848, VG-848-H, VG-849C, VG-859C and VG-835-B. Due to the same number of key switch as standalone VG, operation similar to VG is possible.

Remote control of various functions such as editing program data, calling program No. directly, pattern select, RGB on/off and so on.

## RB-1870

### Remote Control Box

This remote control box is designed to be used with the VG-870 and 871 generators. It is equipped with the same operational system as the stand-alone type so it can be used to do the same kinds of editing work and other operations as the stand-alone type.

## RB-1871

### Remote Control Box

This remote control box is designed to be used with the VG-870 and 871 generators. It is used to call programs, switch between various patterns and perform other simple operations by remote control, and it is intended for use on heavy-duty production lines and other such applications.
