2.Driver

2.1 Install WMDIO Driver

The drivers are for Windows 7/8. Please double click install.bat in driver directories to start install.

When the driver is successfully installed, you can see "Drivers Updated successfully" message in the dos prompt.

```
C:\Windows\system32\cmd.exe
F:\SDK\Driver\WIN7\WMDIO>DEUCON.EXE INSTALL wmdio.inf "root\WMDIO"
Device node created. Install is complete when drivers are updated...
Updating drivers for root\WMDIO from F:\SDK\Driver\WIN7\WMDIO\wmdio.inf.
Drivers updated successfully.
F:\SDK\Driver\WIN7\WMDIO>pause
Press any key to continue . . . _
```

And "WMDIO" devices are also added in the Device Manager under "System devices"

Warning: It is important that only one WMDIO devices can appear in Device Manager.

3. Programming environment

3.1 Project Setting

To control the device power state, brightness, led flash control and obtain SMBIOS information, dynamic file (dll), library (lib) and header (h) files are provided to develop the Application.

WMDIODLL.lib	Library
WMDIODLL.dll	Dynamic Library
WMDIODLL.h	Header File

1. Include “WMDIODLL.h” in the project.
2. Add “WMDIODLL.lib” into project Link.
3. Put “WMDIODLL.dll” in the same path with application or into “windows” directory.
4. Check “WMDIODLL.dll” version is 2.0.0.0

3.2 WMDIODLL.h File Reference:

```
#ifdef WMDIODLL_EXPORTS
#define WMDIO_API extern "C" __declspec(dllexport)
#else
#define WMDIO_API extern "C" __declspec(dllimport)
#endif

WMDIO_API int WM_GpioOpen(void);
WMDIO_API int WM_GpioClose(void);
WMDIO_API int WM_SetGpioDirection(UINT16 uiData); //1:input 0:output
